

JJSDK apply for Unity

Author : Michael Chen, Victor Lin

Date : 2022/10/19

1 Software requirement and Sample

Software	Sample
UnityHub	V3.3.0
Unity	2021.3.16f1
JJSDK	JJSDK_v1.3.3

2 Unity Installation

2.1 Search 「unity hub download」 · Select 「Download Unity」

2.2 Select 「Download Unity Hub」

2.3 After downloading, open Unity Hub

2.4 "Register" and "Login to Unity Account"

2.5 Click the "gear icon" in the upper right corner, then click "License Management" in the left column, and click "Enable New Authorization"

2.6 Select the appropriate authorization method according to the Unity specification. After the authorization is completed, click the "X" in the upper right corner to return to the main screen

2.7 Click "Install" in the left column, and then press the "Install Editor" button on the upper right

2.8 Select the desired version, take 2020.3.16f1 as an example, and click "Long-term Maintenance Version"

2.9 Find "LTS Release 2021.3.16f1" in the list and click "Unity Hub"

- 2.10 If a query window appears, take Chrome as an example, click "Open
"Unity Hub"

- 2.11 Check "Microsoft Visual Studio", "Android Build Support (Android SDK & NDK Tools, OpenJDK)" for new modules

- 2.12 Click "Continue" and follow the steps. After the download is complete, "Sign in with your Microsoft account" to use Visual Studio

3 JJSDK Download

3.1 Enter Jorjin official website · <https://www.jorjin.com/>

3.7 Select 「Support」 -> 「FAQ」

3.3 Click "How can I get the SDK (Software Development Kit)" under J-Reality
-> 「from here」

3.4 Fill out the "AR Glasses SDK Application Form" and download JJSDK from the hyperlink in the email

4 Unity Project Set up

4.1 Open Unity Hub, click "New Project" in the project, set the name and path, and "create" a Unity project

4.2 Project Settings

4.2.1 Select 「Edit」 -> 「Project Settings...」

4.2.2 Select 「Android」 Platform ◦

4.2.3 Select 「Resolution and Presentation」 then 「Orientation」
=> Default Orientation Select 「Landscape Left」 or 「Landscape Right」
· this setting is better for the display of glasses ; 「Other Settings」
=> Identification => Minimum API Level select 「Android 8.1 'Oreo' (API level 27)」
; Target API Level select 「Android 8.1 'Oreo' (API level 27)」 ; check 「Other Settings」
=> Script Compilation => 「Allow 'unsafe' code」 ◦

PS: If you use the Jorjin eyetracking SDK, the Minimum API Level and Target API Level must be set to API level 28.

4.3 Import JJSDK

4.3.1 Under the previously downloaded JJSDK folder ,
JJSDK_v1.3.1\SampleCode\Unity\JJUnityPlugin\Assets

All folder copied to 「[Project folder]\Assets」 , Scripts , folder will be created automatically , Unity will automatically import data into Project .

4.3.2 JJSDK sample code is inside
JJSDK_v1.3.1\SampleCode\Unity\JJUnityPlugin\Assets\Scripts
, including CamRenderer.cs , DisplayExample.cs ,
SensorExample.cs and ToFExample.cs , each will demonstrate
how to get the image of camera , display and switch 2d and 3d
mode , how to get the date of the value of ToF sensor .

4.3.3 Compose the program with reference to the sample code

4.3.4 Open Unity > Project > Scenes > SampleScene
Screen will like this

5 Output apk file

5.1 Select 「File」 -> 「Build Settings...」

5.2 Select 「Android」 platform , and select 「Switch Platform」

5.3 Select 「 Add Open Scenes 」 · add required scene(preset is

SampleScene)

5.4 Select 「 Build 」 and output apk file · Transfer and install on your Android device with a usb cable (or via cloud drive, ftp, adb, etc.)

6 Execute app

6.1 Before opening the app, go to the settings of the Android device and open all the app permissions of the app, or add the relevant code to request permission in Unity

6.2 Open the app and allow the app to access the permission of the smart glasses, then you can use it
